Proposal for internet upgrade

The current transmitters used for the internet are no longer legal because of the frequency on which they transmit. The government has specified the frequency for strictly another use. Anyone using that frequency is functioning illegally. With the needed upgrade for the radios the IT department also suggested updating the rest of the internet system to fiber optics, as the semesterly expenses are becoming more and more expensive as the equipment ages. Not only would it be more cost effective, long term, but there is also less risk of lightning damage. It was originally suggested that we do the upgrade with the internet radios and then the school computers. After talking with the IT department they believe it is more of a priority to install fiber optics at this point than to upgrade the school computers.

Internet radio upgrade – R\$7.030,00

Fiber optics installation – R\$13.500,00

---

Total – R\$20.530,00

Voor het project voor het schooldak in PQQ Amazonas, Brazilië is ruim € 16500,- binnen gekomen  
Extra wat daarna nog ontvangen hebben is gebruikt voor vernieuwing van het internet systeem € 2500,-  
Vervolgens is er nog een project geweest om, na het overlijden van Joel Ketcham, de weduwe te helpen  
in de extra kosten. € 800,-  
Hieronder het bedankje via Jeremy Ketcham

The Summit team from the Netherlands did an incredible job working on the High School roof and painting many school buildings. I say incredible because the job was hot, tiring, monotonous and oftentimes boring--not easy. A hard worker is one who sticks-to-it anyway and they did!

**The BEST thing was that one of the guys came to know the Lord personally!**
